

## LED HORTICULTURE LIGHTING

### GT200 PANEL LIGHT

#### Features and Benefits

- High Efficiency
- Low Heat-output
- No yearly bulb changes
- Balanced Spectrum
- High Light Output
- 200W, 420PPF, 2.1  $\mu\text{mol}/\text{J}$
- 5 year warranty

Start with the latest technology - Finish with the best results.

GT200 is a high efficiency LED panel featuring a balance light spectrum. Ideal for all stages of plant development. LED technology allow for safe operation in small grow tents and confined spaces. Other non- led technologies generate lots of heat and must be kept a safe distance from plants and other materials.

GT200 can be placed close to the plant canopy for higher PPFD. Light levels are simply adjusted by adjusting the height above the canopy. Use of a light meter is suggest to insure light levels are ideally matched for the growth stage.
